Content

- Assignment #7

New assignment

Do this week assignments

- Flask website, that obtain the name given a RUT. Using previous assignments material
 - Use web scraping
- Create Dockerfile to automatically run a flask webserver with the site

Some details

- The src code must be in your github repository as previous works
- It must use a css framework (the flask website)
 - Use the static folder

Grades

- 1 If not submission
- 4 if flask website is complete without css framework, and web scraping works
- 6 if flask website is complete with a css framework, and web scraping works
- 7 if all previous and Dockerfile

When done:

- Send an email to inform to cristhian.aguilera@ulagos.cl. Then I will check your repository.
